

Senior Software Developer - Technical Lead

Position Summary

Reporting to the Vice President of Product Engineering, the Senior Software Developer is responsible for the full life cycle of product development and integration, including gathering requirements, designing and architecting new software, and writing code for complex windows applications. As new developers are hired, you will provide leadership to the team. You will also work closely with other business units, developers, and senior management. This position is responsible for furthering the development of Delfigo's Identity and Access Management solution platform.

Employees in this role use design documentation, such as functional programming specifications and high-level design documents to implement the identified components. They also ensure that the implemented components are unit-tested and ready to be integrated. Software developers also provide fixes to defects identified by the verification team during the software development life cycle.

Responsibilities

- Develop in-depth knowledge of Delfigo's application platform, product development roadmap, and existing customer deployments.
- Work with management to develop functional and technical specifications for the continuing development of the software platform.
- Develop, enhance, and maintain the core code base.
- Identify, plan, and develop specific customizations to the Delfigo product line in response to vertical industry or unique customer requirements.
- Train new developers and manage their contributions to the development effort.

Requirements

- Strong windows application development skills
- Fluency in English
- Proven ability to lead and manage a development team
- Located in the Boston area
- Some travel may be necessary
- High motivation

Education

BS in Computer Science, or equivalent experience, required.

Experience

- 5+ years of software development experience
- 2+ years experience developing web applications in ASP and Java
- 1+ year experience developing web applications in PHP
- 1+ years experience with SQL
- Familiarity with IT Security and Software Security issues
- Familiarity with SaaS architectures
- Excellent oral and written communication skills, as well as presentation skills
- Proven track record of successful software engineering
